

## Assignment 6A

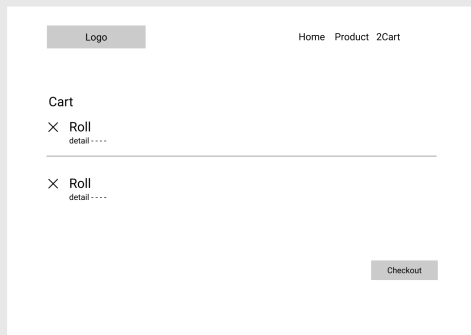

### lo-wi - product detail

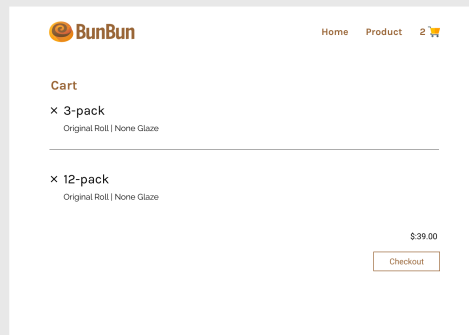

### hi-wi - product detail

### lo-wi - cart

### hi-wi - cart

I changed features in the product detail page. In the previous design, I applied a drop down menu, to make the page more clean, and organized. And in this new design, I kept the drop down menu for quantity, but changed it into a checkbox for glaze, for it allows the user to choose more than one glaze.

I added a new cart page, showing product detail, like quantity, flavour, glaze. There will be a delete button for every item, so users can delete them from the cart. The total price will be shown in the right bottom corner, a design pattern used by many food websites.
